

PUNTEO®-N
IN METAL CEILING

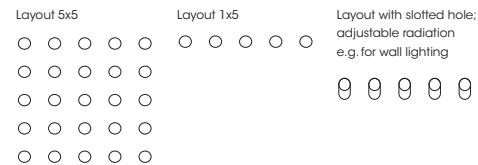

PUNTEO®-N IN METAL CEILING

LED spotlights can optimally be combined with the ceiling

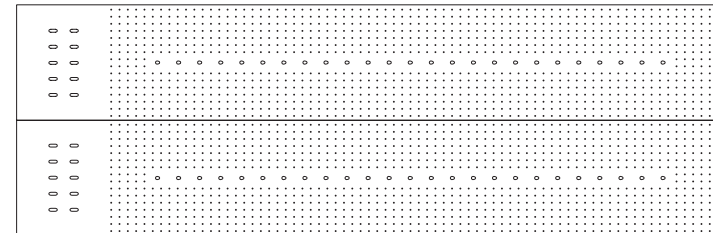

PUNTEO®-N are LED spotlights which can be adapted individually to the interior design. With an efficiency of more than 80%, PUNTEO®-N also complies with all requirements of an environmentally-friendly lighting system. PUNTEO®-N can be optimally integrated into the durlum ceiling systems. With the LED-based PUNTEO®-N technology, no lights are visible any more. Instead, only 8mm small openings in the shrouds or plates of the metal ceiling, through which the light emerges. The light of the LED is conducted through the small opening in the metal ceiling plate with a lens system.

Benefits

- Area lighting through cross-over radiation
- Can be distributed evenly across the room
- Independent arrangement of workplaces
- Very good fade-out
- Heat is not radiated into the room, but into the ceiling void
